

What research can have the greatest impact to improve quality of life of persons in North America's Tribal Nations? WP#4 2025

What research can have the greatest impact to improve the quality of life of persons in North America's Tribal Nations, as well as Aboriginal people in other continents? Native people have been underrepresented in quality of life (QOL) research to mitigate health disparities.

Native American reservations are designated areas of land set aside by the United States government for Native American tribes. The history of reservations is intricately linked to the complex and often tragic relationship between Native Americans and the U.S. government. Despite the challenges, Native American reservations remain vital centers of cultural preservation. They are home to diverse traditions, languages, and art forms that have been passed down through generations. The same can be said about the indigenous people of Alaska.

In the articles we receive from the call for articles, we wish to share information involving STEM education, health practices, mental and psychological research, etc. that if better understood it can contribute to quality-of-life improvement and a better valued sense of place. We are sharing this article call with our network in Australia because of the fine work being done with Aboriginal assimilation and economic advancement to understand any similarities.

Focus Areas

- **Inclusion and Diversity in Research Participation**
 - Strategies to engage community participation
 - University led initiatives
- **Role and Influence by Bureau of Indian Affairs, US department of Interior**
 - Budget and operations
 - Legal system and justice
- **Community/Tribal Collaboration**
 - Issues specific to tribal groups location
 - Natural resources economic opportunities
- **Research in North America and abroad**
 - Science education and gender studies
 - Climate and environmental studies

White Paper Guidelines

- Length: Submissions should range between 1,500 and 3,000 words.
- Author Credentials: Include a brief biography highlighting expertise in relative native people and aboriginal research topics

Content Style: Papers should provide in-depth analysis, actionable recommendations, and a professional tone suited for academic, clinical, and policy audiences.

Submission Details

- Deadline: **Sept. 20, 2025**
- Submit to: Publisher, info@snchronicle.com

Join the Discussion

Be part of helping to shape the future of native and first people. Your white paper can provide valuable insights into how research can responsibly lead to better lives for persons not fully integrated into society. By contributing, you will help establish better practices and understanding of the value of building inclusive data on societal and economic factors not well known and under studied

Submit your white paper to make a meaningful knowledge impact in this critical field.
